

Node.js Custom Module Assignment

roll:2315000039 sec:C

1. Create a `greetings.js` Module

- Write a function `greet(name)` that returns: "Hello, ! Welcome to the Node.js module system."
- Export the function as a module.

Ans:

The screenshot shows two files in a VS Code editor. The file 'file.mjs' on the left contains the following code:

```
1 import greet from './greetings.js'
2 console.log(greet("arthur"))
```

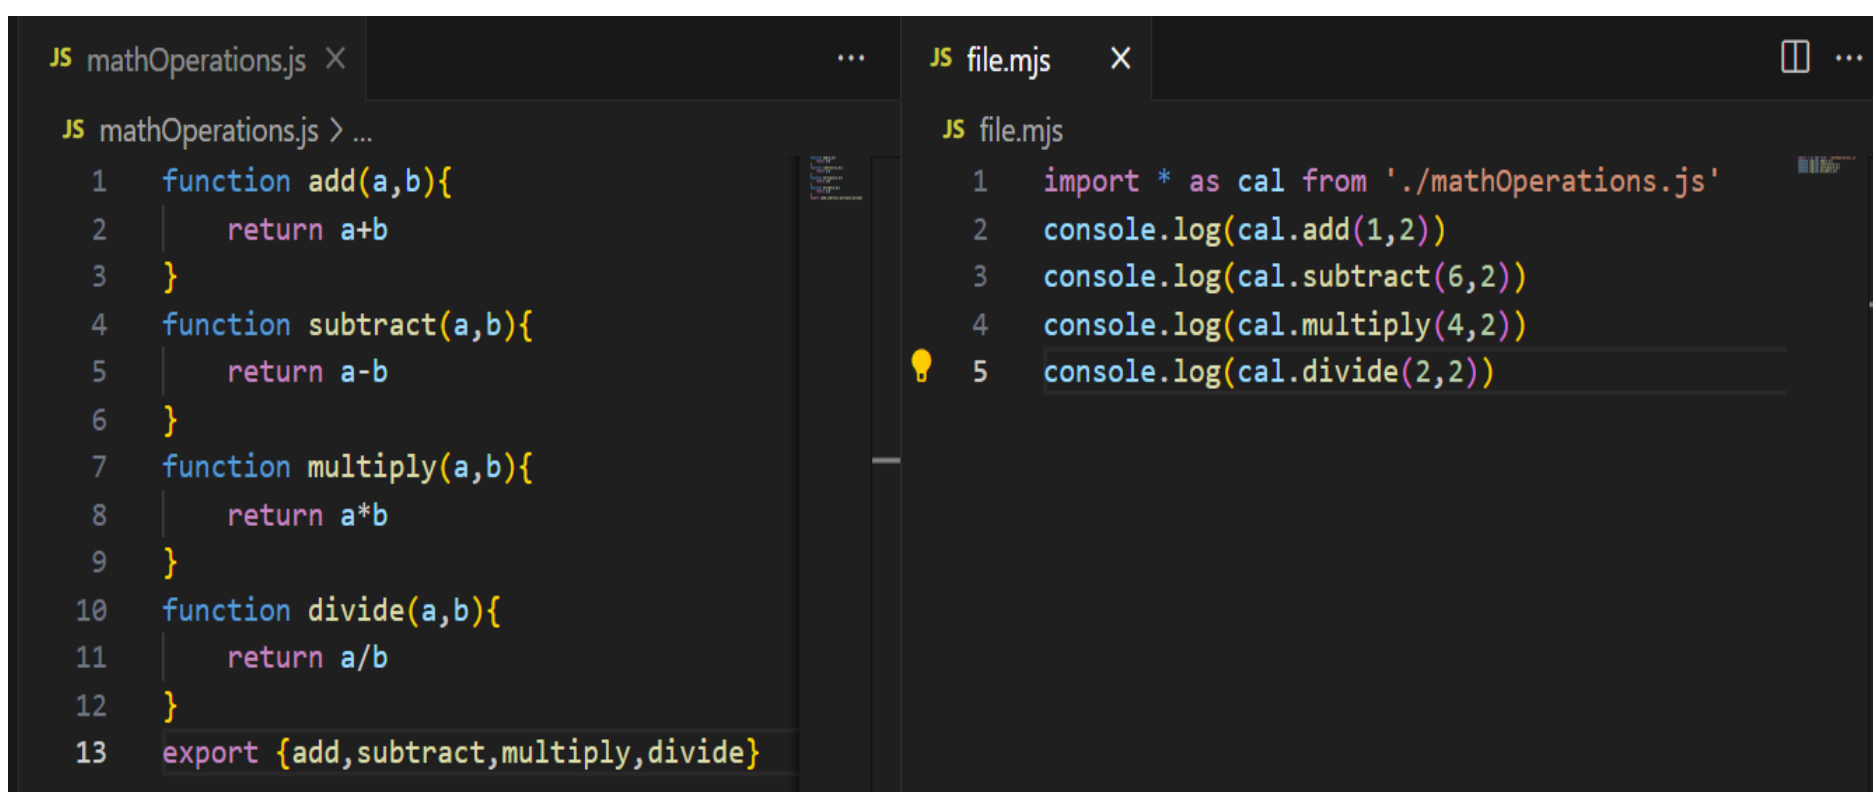

The file 'greetings.js' on the right contains the following code:

```
1 function greet(name){
2   return "Hello, ! Welcome to the Node.js module system."
3 }
4 export default greet;
```

2. Create a `mathOperations.js` Module

- Write and export the following functions:
- `add(a, b)` - returns the sum of two numbers.
- `subtract(a, b)` - returns the difference between two numbers.
- `multiply(a, b)` - returns the product of two numbers.
- `divide(a, b)` - returns the quotient of two numbers.

Ans:

The screenshot shows two files in a VS Code editor. The file 'mathOperations.js' on the left contains the following code:

```
1 function add(a,b){
2   return a+b
3 }
4 function subtract(a,b){
5   return a-b
6 }
7 function multiply(a,b){
8   return a*b
9 }
10 function divide(a,b){
11   return a/b
12 }
13 export {add,subtract,multiply,divide}
```

The file 'file.mjs' on the right contains the following code:

```
1 import * as cal from './mathOperations.js'
2 console.log(cal.add(1,2))
3 console.log(cal.subtract(6,2))
4 console.log(cal.multiply(4,2))
5 console.log(cal.divide(2,2))
```

3. Create a `main.js` File

- Import both `greetings.js` and `mathOperations.js`.
- Use `greet(name)` to greet a user.
- Perform all four math operations and log the results

Ans:

The image shows a Visual Studio Code editor with three files: `mathOperations.js`, `greetings.js`, and `main.js`. The `main.js` file imports functions from the other two files and uses them to demonstrate the module system. A terminal window shows the output of running `node .\main.js`.

```
JS mathOperations.js > ...
1 function add(a,b){
2   return a+b
3 }
4 function subtract(a,b){
5   return a-b
6 }
7 function multiply(a,b){
8   return a*b
9 }
10 function divide(a,b){
11   return a/b
12 }
13 export {add,subtract,multiply,divide}

JS greetings.js > default
1 function greet(name){
2   return "Hello, ! Welcome to the Node.js module system."
3 }
4 export default greet;

JS main.js
1 import greet from './greetings.js'
2 console.log(greet("arthur"))
3
4 import * as cal from './mathOperations.js'
5 console.log(cal.add(10,10))
6 console.log(cal.subtract(16,6))
7 console.log(cal.multiply(5,15))
8 console.log(cal.divide(20,10))

PS C:\Users\Abhinav\OneDrive\Desktop\new> node .\main.js
Hello, ! Welcome to the Node.js module system.
20
10
